GramVision AI

Village Baseline Survey Report

Rampur Kalan | Karnataka, India

Field	Detail
Survey Type	Household + Field + Infrastructure Census
Conducted By	GramVision AI Field Team / Panchayat Volunteers
Survey Period	02 Sep 2026 - 14 Sep 2026
Data Sources	Household survey (428), drone imagery, satellite (NDVI/NDWI), Panchayat records
Population Covered	2,104 residents across 428 households
Total Village Area	12.4 sq. km (864 acres farmland)
Report Purpose	Baseline input for AI Village Digital Twin analysis and CSR/Government planning

This report summarizes field survey findings across six development sectors: Water, Healthcare, Agriculture, Infrastructure, Education and Environment. Findings feed directly into the AI Village Digital Twin multi-agent analysis to generate development scores and prioritized recommendations.

1. Village Demographics

Indicator	Value
Total Population	2,104
Total Households	428
Average Household Size	4.9
Farming Households	356 (83%)
Below Poverty Line (BPL) Households	142 (33%)
Primary Occupation	Agriculture & allied labour (78%)

2. Water Resources Survey

Field Score: **35 / 100** — High Risk

Observation	Recorded Data
Primary water source	1 overhead tank + 3 borewells + 1 seasonal pond
Groundwater trend (5-yr dept. records)	Declining at -3.2 m/year
Overhead tank utilization	40% of rated capacity in use
Households with piped supply	61% (261 of 428)
Avg. summer water availability	2.1 hrs/day (Apr-Jun)
Existing rainwater harvesting structures	None at household level; 1 community catchment (unused)
Estimated rainwater harvesting potential	Can meet ~70% of annual demand if developed

Field Note: Community reports water tankers required for ~6 weeks every summer. Tank water quality tested 'Good' but availability is the binding constraint.

3. Healthcare Survey

Field Score: **42 / 100** — Needs Attention

Observation	Recorded Data
Primary Health Centre (PHC)	1 PHC - 1 doctor, 2 nurses, serving 2,100+ people
Child immunization coverage	62% (target: 90%)
Water-borne disease incidence (monsoon, last year)	48 reported cases (diarrhoea/typhoid)
Institutional deliveries	71%
Distance to nearest referral hospital	18 km
PHC equipment status	Basic diagnostics only; no telemedicine link

4. Agriculture Survey

Field Score: **54 / 100** — Moderate

Observation	Recorded Data
Total farmland	864 acres
Major crops	Wheat, soybean, pulses (minimal millet)
NDVI (satellite, current season)	0.72 (healthy crop cover)
Irrigation coverage	Drip/sprinkler on 62% of farmland; rest rain-fed
Soil organic carbon	Low (0.38%) across 70% of sampled fields
Estimated yield loss risk (erratic rainfall)	Up to 18% in rain-fed plots
Farmer interest in millet/pulse diversification	High (per household survey)

5. Infrastructure Survey

Field Score: **81 / 100** — Good

Observation	Recorded Data
Rural road network	9.6 km total; 2.4 km in poor condition
Household electrification	92%
Housing condition	Good; majority pucca construction
Community centre	Active; used for skilling & events
Last-mile market connectivity	Gaps reported during monsoon

6. Education Survey

Field Score: **72 / 100** — Good

Observation	Recorded Data
Schools in village	2 (1 primary, 1 upper-primary)
Total enrolled students	320
Infrastructure condition	Good; needs digital learning center
Attendance trend (3-yr)	Improving (+6% YoY)
Teacher-student ratio	1:28

7. Environment Survey

Field Score: **66 / 100** — Moderate-Good

Observation	Recorded Data
Green cover (satellite estimate)	Good overall coverage
Water body encroachment risk	Observed near community pond
Tree cover near farmland edges	Declining; deforestation risk flagged

Renewable energy presence	None currently installed

Community Feedback Summary: "Water security and healthcare access are our top concerns. We are willing to contribute labour for rainwater harvesting and road repair works." — Gram Sabha meeting, 10 Sep 2026.

This survey data was ingested into the AI Village Digital Twin, where multi-agent AI (Water, Health, Agriculture, Infrastructure, Impact Planner) cross-analyzed the findings with satellite imagery to generate the Overall Development Score of 68/100 and the prioritized investment recommendations presented in the dashboard.
